EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Byron S. Kuzara on October 2, 2006.

The application has been amended as follows:

Claims 36-39 have been CANCELLED.

2. The following is an examiner's statement of reasons for allowance:

The prior art of record do not anticipate nor do they reasonably suggest the culinary implement as claimed in claims 1, 12, 21 and 24. The closest prior art, Scheminger (US 5,555,625), teaches a rotary cutter comprising many of the claimed features including, inter alia, a handle (16); an attachment arm (20); and a head portion (e.g. 12) wherein the head portion is positioned such that the longitudinal axis of the handle extends through the head portion and between the first and second circular sides of the head portion. Note Figs. 1-5, especially Fig. 3. However, Scheminger lacks the attachment arm attaching to only the second side of the head portion and is absent from the first side of the head portion. Another closely related prior art, Smith (US 699,584), teaches a paper cutter in which the head portion (D) is attached the attachment arm on one side of the head portion only. However, as shown in Fig. 2, the longitudinal axis of the handle (A) does not extend between the two circular sides of the head portion. Similar reasoning applies to claims 1, 12, 21, and 24. Any modification of Scheminger

with the teachings of Smith would destroy the teachings of Scheminger since Scheminger specifically includes a swing arm (20) which attaches to the other side of the circular head portion thereby negating the requirement of the one sided attachment set forth in the claims. Conversely, modification of Smith in view of the teachings of Scheminger would be construed as improper hindsight reasoning since it would be the Applicant's disclosure that provides the motivation as opposed to the prior art. For example, Smith's device is used to cut paper with the use of a guide (J). Thus the cutting head is leveraged thereagainst as shown in Fig. 2 of Smith. If the arm and the head were so designed such that head is collinear with the longitudinal axis of the handle, the leverage to be had would be subpar than the offset shown in Smith.

Regarding claim 33, the closest prior art, Mould (US 3,924,328), teaches a cutting tool comprising, inter alia, a handle (e.g. to the left of 2 in Fig. 2) and projections (e.g. 24) that are pyramidal. However, none of the projections have a configuration that is twisted in a direction that extends around a height axis of the projection.

Thus, it is believed that the claimed inventions with the lacking features in combination with all the other recited elements are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
